Che mondo sarebbe senza **metadati**?

The image shows a screenshot of an email client interface. The window title is "Scarica messaggi" and the menu bar includes "File", "Modifica", "Visualizza", "Vai", "Messaggio", "Eventi e attività", "Strumenti", and "Aiuto". The main area displays a list of incoming emails ("Posta in arrivo") with columns for "Oggetto", "Corrispondenti", and "Data". Below the list, the details of a selected email are shown, including the sender ("Da"), recipient ("A"), and subject ("Oggetto"). The email content is from "amazon.it" and includes a greeting ("Ciao"), a thank you ("Grazie per"), a section titled "ARTICOLI", and a link to "Raccontaci la tua esperienza!". The interface also features a toolbar with buttons for "Rispondi", "Inoltra", "Elimina", "Invieta", and "Altro". The "Elimina", "Inoltra", and "Invieta" buttons are marked with red X's, indicating they are disabled or being highlighted for discussion.

The background features several interlocking gears. On the left, there are two gears with a wireframe or mesh-like texture. On the right, there are three solid, metallic-looking gears. The overall aesthetic is technical and mechanical.

Adotta un **m**etadato

Ricorda: ogni dato è metadato a qualche dato ;)
